

## **Course 20740A: Installation, Storage, and Compute with Windows Server 2016**

Type:	Course
Audience(s):	IT Professionals
Technology:	Windows Server
Level:	200
This Revision:	A
Delivery method:	Classroom
Length:	5 days
Language(s):	English
Publication date:	23 September 2016

### **About this course**

This five-day course is designed primarily for IT professionals who have some experience with Windows Server. It is designed for professionals who will be responsible for managing storage and compute by using Windows Server 2016, and who need to understand the scenarios, requirements, and storage and compute options that are available and applicable to Windows Server 2016.

**Audience profile** This course is intended for IT professionals who have some experiencing working with Windows Server, and who are looking for a single five-day course that covers storage and compute technologies in Windows Server 2016. This course will help them update their knowledge and skills related to storage and compute for Windows Server 2016.

### **Candidates suitable for this course would be:**

- **Windows Server administrators who are relatively new to Windows Server administration and related technologies, and who want to learn more about the storage and compute features in Windows Server 2016.**
- **IT professionals with general IT knowledge, who are looking to gain knowledge about Windows Server, especially around storage and compute technologies in Windows Server 2016.**

## **Course 20740A: Installation, Storage, and Compute with Windows Server 2016**

The secondary audience for this course are IT professionals looking to take the Microsoft 70-740 certification exam, Installation, Storage and Compute with Windows Server 2016. **At course completion**

After completing this course, students will be able to:

- Prepare and install Nano Server, a Server Core installation, and plan a server upgrade and migration strategy.
- Describe the various storage options, including partition table formats, basic and dynamic disks, file systems, virtual hard disks, and drive hardware, and explain how to manage disks and volumes.
- Describe enterprise storage solutions, and select the appropriate solution for a given situation.
- Implement and manage Storage Spaces and Data Deduplication.
- Install and configure Microsoft Hyper-V.
- Deploy, configure, and manage Windows and Hyper-V containers.
- Describe the high availability and disaster recovery technologies in Windows Server 2016.
- Plan, create, and manage a failover cluster.
- Implement failover clustering for Hyper-V virtual machines.
- Configure a Network Load Balancing (NLB) cluster, and plan for an NLB implementation.
- Create and manage deployment images.
- Manage, monitor, and maintain virtual machine installations.

### **Course Outline Module 1: Installing, upgrading, and migrating servers and workloads**

This module explains how to prepare and install Nano Server and Server Core. This module also explains how to upgrade and migrate server roles and workloads. Finally, this module explains how to choose an activation model based on your environment characteristics.

#### **Lessons**

Introducing Windows Server 2016  
Preparing and installing Nano Server and Server Core  
Preparing for upgrades and migrations  
Migrating server roles and workloads  
Windows Server activation models

#### **Lab : Installing and configuring Nano Server**

Implementing Nano Server  
Completing post-installation tasks on the Nano Server  
Performing remote management

After completing this module, students will be able to:

Choose the appropriate version of the Windows Server operating system, and describe the installation options and new features of Windows Server 2016.

Prepare and install Nano Server and Server Core.

Consider whether an upgrade or migration is the best approach, and use tools to help determine upgrade or migration suitability.

## **Course 20740A: Installation, Storage, and Compute with Windows Server 2016**

Migrate server roles and workloads within a domain and across domains or forests.  
Choose an activation model based on your environment characteristics.

### **Module 2: Configuring local storage**

This module explains how to manage disks and volumes in Windows Server 2016.

#### **Lessons**

Managing disks in Windows Server 2016  
Managing volumes in Windows Server 2016

### **Lab : Managing disks and volumes in Windows Server 2016**

Creating and Managing virtual hard disks by using Windows PowerShell  
Converting virtual hard disks from .vhd to .vhdx  
Resizing a volume  
After completing this module, students will be able to:  
Manage disks in Windows Server 2016.  
Manage volumes in Windows Server 2016.

### **Module 3: Implementing enterprise storage solutions**

This module describes the direct-attached storage (DAS), network-attached storage (NAS), and storage area networks (SANs). It also helps you understand Microsoft Internet Storage Name Service (iSNS) Server, data center bridging, and Multipath I/O (MPIO). Additionally, this module also compares Fibre Channel, Internet Small Computer System Interface (iSCSI), and Fibre Channel Over Ethernet (FCoE), and describes how to configure sharing in Windows Server 2016.

#### **Lessons**

Overview of direct-attached storage, network-attached storage, and storage area networks  
Comparing Fibre Channel, iSCSI, and FCoE  
Understanding iSNS, data centre bridging, and MPIO  
Configuring sharing in Windows Server 2016

### **Lab : Planning and configuring storage technologies and components**

Planning storage requirements  
Configuring iSCSI storage  
Configuring and managing the share infrastructure

## **Course 20740A: Installation, Storage, and Compute with Windows Server 2016**

After completing this module, students will be able to:

Describe DAS, NAS, and SANs, and the usage scenarios for each topology.

Compare Fibre Channel, FCoE, an iSCSI target and initiator. Describe iSNS, MPIO, data center bridging, and Windows Storage Server 2016 (two versions—Workgroup and Standard).

Configure server message block (SMB) and network file system (NFS) shares by using Server Manager and Windows PowerShell.

### **Module 4: Implementing Storage Spaces and Data Deduplication**

This module explains how to implement and manage Storage Spaces. This module also explains how to implement Data Deduplication.

#### **Lessons**

Implementing Storage Spaces

Managing Storage Spaces

Implementing Data Deduplication

#### **Lab : Implementing Storage Spaces**

Creating a storage space

Enabling and configuring storage tiering

#### **Lab : Implementing Data Deduplication**

Installing Data Deduplication

Configuring Data Deduplication

After completing this module, students will be able to:

Implement Storage Spaces as an enterprise storage solution.

Manage Storage Spaces by using Server Manager and Windows PowerShell.

Implement Data Deduplication.

### **Module 5: Installing and configuring Hyper-V and virtual machines**

This module provides an overview of Hyper-V. This module also explains how to configure, manage, and install Hyper-V.

#### **Lessons**

Overview of Hyper-V

Installing Hyper-V

Configuring storage on Hyper-V host servers

Configuring networking on Hyper-V host servers

Configuring Hyper-V virtual machines

## **Course 20740A: Installation, Storage, and Compute with Windows Server 2016**

Managing Hyper-V virtual machines

### **Lab : Installing and configuring Hyper-V**

Installing the Hyper-V server role

Configuring Hyper-V settings

Creating and configuring a virtual machine

Managing a virtual machine by using PowerShell Direct

After completing this module, students will be able to:

Describe Hyper-V and virtualization.

Prepare to install the Hyper-V role.

Configure storage on Hyper-V host servers.

Configure networking on Hyper-V host servers.

Configure Hyper-V virtual machines.

Move virtual machines from one host to another host, using PowerShell Direct to manage a virtual machine, and manage miscellaneous virtual machine settings.

### **Module 6: Deploying and managing Windows Server and Hyper-V containers**

This module provides an overview of containers in Windows Server 2016. It also explains how to deploy, install, configure, and manage containers in Windows Server 2016.

#### **Lessons**

Overview of containers in Windows Server 2016

Deploying Windows Server and Hyper-V containers

Installing, configuring, and managing containers

### **Lab : Installing and configuring containers**

Installing and configuring Windows Server containers by using Windows PowerShell

Installing and configuring Windows Server containers by using Docker

After completing this module, students will be able to:

Explain the purpose of Windows Server and Hyper-V containers.

Deploy and manage Windows Server and Hyper-V containers.

Install, configure, and manage containers.

### **Module 7: Overview of high availability and disaster recovery**

This module provides an overview of high availability, business continuity, and disaster recovery. It further explains how to plan high availability and disaster recovery solutions. Additionally, in this module you will know how to back up and restore the Windows Server 2016 operating system and

## **Course 20740A: Installation, Storage, and Compute with Windows Server 2016**

data by using Windows Server Backup. Finally, you will learn about Windows Server 2016 high availability with failover clustering.

### **Lessons**

Defining levels of availability

Planning high availability and disaster recovery solutions with Hyper-V virtual machines

Backing up and restoring the Windows Server 2016 operating system and data by using Windows Server B

High availability with failover clustering in Windows Server 2016

### **Lab : Planning and implementing a high availability and disaster recovery solution**

Determining the appropriate high availability and disaster recovery solution

Implementing storage migration

Implementing Hyper-V Replica

After completing this module, students will be able to:

Describe high availability, business continuity, and disaster recovery.

Plan for high availability and disaster recovery solutions with Hyper-V virtual machines.

Back up and restore Hyper-V hosts, virtual machines, Active Directory Domain Services (AD DS), and file and web servers by using Windows Server Backup.

Describe Windows Server 2016 high availability with failover clustering.

### **Module 8: Implementing and managing failover clustering**

This module explains how to plan, create, configure, maintain, and troubleshoot a failover cluster.

This module also explains how to implement site high availability with stretch clustering.

### **Lessons**

Planning a failover cluster

Creating and configuring a new failover cluster

Maintaining a failover cluster

Troubleshooting a failover cluster

Implementing site high availability with stretch clustering

### **Lab : Implementing a failover cluster**

Creating a failover cluster

Verifying quorum settings and adding a node

### **Lab : Managing a failover cluster**

Evicting a node and verifying quorum settings

Changing the quorum from Disk Witness to File Share Witness, and defining node voting

## **Course 20740A: Installation, Storage, and Compute with Windows Server 2016**

Adding and removing disks from the cluster

After completing this module, students will be able to:

Describe the requirements and infrastructure considerations for a failover cluster.

Create and configure a new failover cluster.

Monitor and maintain failover clusters.

Troubleshoot failover clusters by using various tools such as Performance Monitor, Event Viewer, and Windows PowerShell.

Configure and implement a stretch cluster.

### **Module 9: Implementing failover clustering for Hyper-V virtual machines**

This module describes integrating Hyper-V virtual machines in a clustered environment. It also explains how to implement and maintain Hyper-V virtual machines on failover clusters. Additionally, this module also explains how to configure network health protection.

#### **Lessons**

Overview of integrating Hyper-V in Windows Server 2016 with failover clustering

Implementing and maintaining Hyper-V virtual machines on failover clusters

Key features for virtual machines in a clustered environment

#### **Lab : Implementing failover clustering with Hyper-V**

Configuring a failover cluster for Hyper-V

Configuring a highly available virtual machine

After completing this module, students will be able to:

Explain the integration of Hyper-V in Windows Server 2016 with failover clustering.

Implement and maintain Hyper-V virtual machines on failover clusters.

Describe and configure network health protection.

### **Module 10: Implementing Network Load Balancing**

This module provides an overview of NLB clusters. It also explains how to plan and configure an NLB cluster implementation.

#### **Lessons**

Overview of NLB clusters

Configuring an NLB cluster

Planning an NLB implementation

#### **Lab : Implementing an NLB cluster**

Implementing an NLB cluster

Configuring and managing the NLB cluster

## **Course 20740A: Installation, Storage, and Compute with Windows Server 2016**

Validating high availability for the NLB cluster  
After completing this module, students will be able to:  
Describe NLB and how it works.  
Configure an NLB cluster.  
Describe the considerations for implementing NLB.

### **Module 11: Creating and managing deployment images**

This module provides an introduction to deployment images. It also explains how to create and manage deployment images by using the Microsoft Deployment Toolkit (MDT). Additionally, it explains how to evaluate an organization's requirements for server virtualization.

#### **Lessons**

Introduction to deployment images  
Creating and managing deployment images by using MDT  
Virtual machine environments for different workloads

### **Lab : Using MDT to deploy Windows Server 2016**

Installing and configuring MDT  
Creating and deploying an image  
After completing this module, students will be able to:  
Explain the purpose of deployment images and the tools that you use to deploy and maintain them.  
Implement and manage deployment images by using MDT.  
Evaluate their organization's requirements for server virtualization.

### **Module 12: Managing, monitoring, and maintaining virtual machine installations**

This module provides an overview on WSUS and explains the deployment options. It explains how to update management process with WSUS and also how to use Performance Monitor. Additionally, this module also provides an overview of PowerShell Desired State Configuration (DSC) and Windows Server 2016 monitoring tools. Finally, this module describes how to use Performance Monitor and monitor Event Logs.

#### **Lessons**

WSUS overview and deployment options  
Update management process with WSUS  
Overview of PowerShell DSC  
Overview of Windows Server 2016 monitoring tools  
Using Performance Monitor  
Monitoring Event Logs

## **Course 20740A: Installation, Storage, and Compute with Windows Server 2016**

### **Lab : Implementing WSUS and deploying updates**

Implementing WSUS

Configuring update settings

Approving and deploying an update by using WSUS

### **Lab : Monitoring and troubleshooting Windows Server 2016**

Establishing a performance baseline

Identifying the source of a performance problem

Viewing and configuring centralized event logs

After completing this module, students will be able to:

Describe the purpose of Windows Server Update Services (WSUS) and the requirements to implement WSUS.

Manage the update process with WSUS.

Describe the purpose and benefits of PowerShell DSC.

Describe the monitoring tools available in Windows Server 2016.

Describe how to use Performance Monitor.

Describe how to manage event logs.

---

### **Prerequisites**

Before attending this course, students must have:

- A basic understanding of networking fundamentals.
- An awareness and understanding of security best practices.
- An understanding of basic AD DS concepts.
- Basic knowledge of server hardware.
- Experience supporting and configuring Windows client operating systems such as Windows 8 or Windows 10.

Additionally, students would benefit from having some previous Windows Server operating system experience, such as experience as a Windows Server systems administrator.
